-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by any one of Kemper (US 6413366) or Britz (USPGP 2004/0256295) or Dolbear (US 1478703) or Dolbear (US 1480884) or DE 10250762) or Tlok (US 5910248). Any of the above patents disclose a device defining a container having a foam layer forming means and means in the upper portion of the container to guide in a fluid. The valve means are inherent or are specifically disclosed. In Kemper '366 there is the fig. 1 embodiment with feed suspension at 5 into the foam layer. In Britz '295 there is the fig. 4 embodiment with feed means 7 into foam layer 12. The Dolbear patents are similar with feed being through rotary drums into the foam layer. DE '762 discloses six different embodiments with the feed being sent into the froth layer. In Tlok '248 there is a foam layer 8 into which water and

particles from influent water feed inlet 2 ultimately engages. Applicant asserts that the rejection above refers to a couple of features with no reasoning or association with the claimed features. Claim 1 recites “ a container operable to retain therein a predetermined quantity of liquid...”. Kemper ‘366 has a container holding foam and liquid, this appears axiomatic. "Means for producing a flow of gaseous fluid through the predetermined quantity of liquid" would be equivalent to gas inlet pipe at "G" in fig. 1, again axiomatic. The foam having the same or similar properties as applicants foam is at 2. There are means at "S" for introducing liquid in the upper portion of the container to be “filtered”. Tlok ‘248 has container (unnumbered, see fig. 1), air inlet 13, and foam at 8. The remaining patents have the same or similar functional elements.

Allowable Subject Matter

2. Claims 13-16 are allowed.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a

first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
